Art Unit: 1651

1. Receipt is acknowledged of the drawings filed October 15, 2002.
2. Claims 1-15 are present in the instant application.
3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 3 and 6 drawn to a biologically pure culture of *Rhizobium rhizogenes* (ATCC PTA-4110), classified in class 435, subclass 252.2.
 - II. Claims 4 and 7 drawn to a biologically pure culture of *Burkholderia* sp. (ATCC PTA-4111), classified in class 435, subclass 252.1.
 - III. Claims 5 and 8 drawn to a biologically pure culture of *Cladosporium cladosporioides* (ATCC 66669), classified in Class 435, subclass 252.1.Claims 1-2 will be examined with the election of one of the above inventions.
- IV. Claims 9-13, drawn to a process for the biomedical treatment of contaminated material containing nitrogenous materials employing the biologically pure culture of Claim 1, classified in Class 435, subclass 262.
- V. Claims 14-15, drawn to a device comprising a nitrogenous energetic material, a housing, energetic material within the shell housing and a quantitative amount of a microorganism, classified in Class 435, subclass 283.1.

Art Unit: 1651

4. The inventions are distinct, each from the other because: Inventions I-III are drawn to patentably distinct microorganisms that are not drawn to the same genus or subgenus that requires separate and distinct searches and examinations for each of the species.

Inventions I, II or III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the microorganisms as claimed can be used in a materially different process of using that product.

Invention V does not require the specifics of Inventions I-III or IV for the device.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, have acquired a separate status in the art because of their recognized divergent subject matter and the search required for one invention is not required for the other invention, thusly the restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

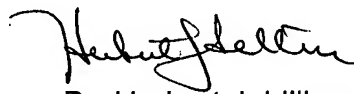

Art Unit: 1651

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
